ACKNOWLEDGEMENT

First and foremost, we would like to express our gratitude to Allah SWT for the strength, patience and good health that allowed our group to complete this corporate website project and report within the given time frame.

We wish to extend our sincere thanks to our lecturer, Dr. Anum, for her continuous guidance throughout the IML254: Introduction to Web Content Development course.

We would also like to thank our group members for the cooperation, division of labour and creative input that went into building “Mystiks”, our fictional horror-journalism corporate website. Each member contributed according to their assigned role — from layout planning and content writing to coding the pages, styling them with CSS, and uploading the final files onto GitHub Pages for hosting.

Finally, we appreciate the opportunity this assignment gave us to apply web content development concepts in a practical, hands-on way, and we hope this report fairly documents the planning, design and development process behind our website.

STUDENT PLEDGE OF ACADEMIC INTEGRITY

As a student of Universiti Teknologi MARA (UiTM), it is my responsibility to act in accordance with UiTM's academic assessment and evaluation policy. I hereby pledge to act and uphold academic integrity and pursue scholarly activities in UiTM with honesty and a responsible manner. I will not engage or tolerate acts of academic dishonesty, academic misconduct, or academic fraud including but not limited to:

- **Cheating:** Using or attempting to use any unauthorized device, assistance, sources, practice or materials while completing academic assessments. This includes but is not limited to copying from another, allowing others to copy, unauthorized collaboration on an assignment or open book tests, or engaging in any act or conduct that can be construed as cheating.
- **Plagiarism:** Using or attempting to use the work of others (ideas, design, words, art, music, etc.) without acknowledging the source; using or purchasing materials prepared by another person or agency or engaging in other behaviour that a reasonable person would consider as plagiarism.
- **Fabrication:** Falsifying data, information, or citations in any academic assessment and evaluation.
- **Deception:** Providing false information with intent to deceive an instructor concerning any academic assessment and evaluation.
- **Furnishing false information:** Providing false information or false representation to any UiTM official, instructor, or office.

With this pledge, I am fully aware that I am obliged to conduct myself with utmost honesty and integrity. I fully understand that disciplinary action can be taken against me if I, in any manner, violate this pledge.

1.0 INTRODUCTION

This report documents the planning, design and development process behind our IML254 group project. The assignment required our group of four students to design and publish a working corporate website that demonstrates the concepts learnt in the Introduction to Web Content Development course over the course of many months and weeks.

Our group chose to build a website for a fictional media company named “Mystiks Horror,” branded with the motto “*Mitos dan Mistik tanpa drama*” (“Myths and Mysteries without the drama”). Mystiks is shown as a paranormal journalism outlet that publishes articles that relate to the mystique and all things out of the normal. To make this site stand out, the website is made to be bilingual (Malay and English). This brand was selected to bring out a more personal and relatable to the target audience.

As required by the assignment guidelines, a disclaimer is displayed in the footer of every page stating that the website is not the official website of any real company, that “Mystiks Media” does not exist, and that the site was developed solely and explicitly for the purpose of learning XHTML and CSS. The live website is hosted on GitHub Pages and can be accessed from the address below:

<https://mystikshorror.github.io/>

The source code is version-controlled in the following public GitHub repository, which also serves as the web host:

<https://github.com/mystikshorror/mystikshorror.github.io>

The site itself will be referred to as “the site” or “Mystiks” as of this point, and the entirety of the project will be referred to as “the project”, this clarification is to avoid confusion to the reader.

Figure 1

Figure 1. Mystiks homepage showing the header image, navigation bar and bilingual welcome message.

This report follows the Website Development Life Cycle (WDLC) structure prescribed in the IML254 guideline, covering Planning (1 Week), Analysis & Discussion (1 Week), Prototyping & Review (3 Weeks), Development & Testing (4 Weeks), Release & SEO (1 Week), and Maintenance (1 Week). All six tasks were done, and were divided by how much time spent in each of the phases across the 12 weeks of its development. Figure 2 illustrates how these six phases were divided across the project.

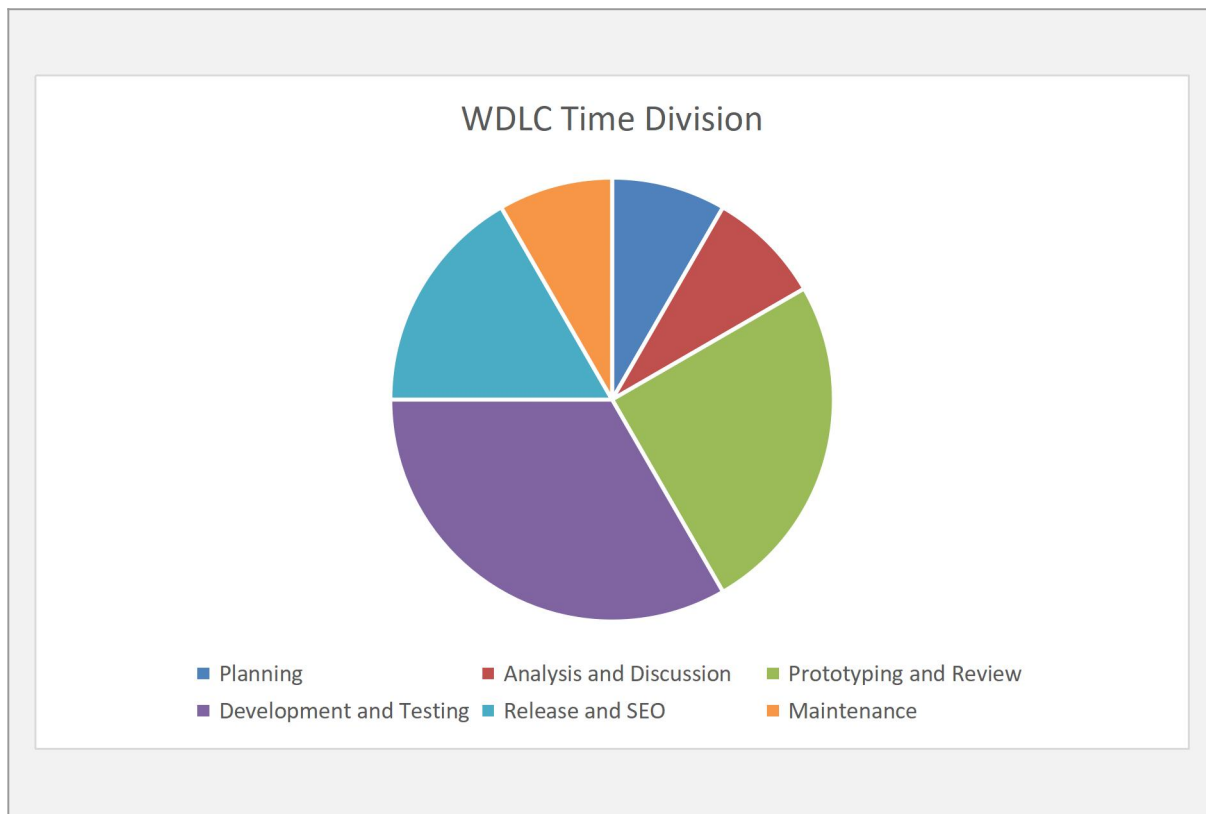

Figure 2

Figure 2. WDLC phases applied to the Mystiks project divided by time spent.

As made visible by the pie chart, the longest time spent out of all of the cuts was spent on development and testing, particularly due to the fact that XHTML does not have very good guidance made available online, part of it being that it is a niche piece of tech from the olden years of programming. Most of the development and testing were spent on the Forum and Video Player, which in the end used RZSY's Riddex Player (2026).

The stages and phases that is used to actually build the site are Prototyping and Review, Development and Testing, Release and SEO, and finally, Maintenance.

2.0 PLANNING

The planning phase focused solely on how the project is to be handled to ensure that all dots along the line was checked and marked. With most of the planning done early on, it

2.1 Purpose and Objectives

The following objectives for the website was decided at the start of the project:

- To design and build a fifteen-page minimum corporate website using XHTML and CSS, as per the group assignment guidelines.
- To create a consistent voice in the fake company's range of vocabulary.
- To publish the finished site through GitHub Pages and have it run smoothly.

All three of these objectives came to fruition and the website is now functioning properly without any life changing hiccups.

2.2 Target Audience

The site, due to its nature of being horror journalism based, are aimed at a broad selection of Malay and English speakers of Malaysian, Singaporean, Indonesian, and Bruneian background, broadly due to the fact that generally, Southeast Asians are very superstitious. This selection wasn't made at random.

It was however a deliberate decision to profit off of the success of multiple Malaysian and Indonesian horror films made popular during the period, example of those being *Polong* (2026) and *Abadi Nan Jaya* (2025).

2.3 Scope of the Website

The site was planned around six main areas, each implemented with its own page, and their following branches. Those six are:

1. Home (index.xhtml) – this is the first page of the site, it links to the rest through the top selection bar and the sidebar, it also houses the Riddex video player that plays the brand's 4 second introduction video.
2. News (news.xhtml) – serves as a catalogue for the articles that were published on the site. Each article is its own page. Those being: 1162026a.xhtml, 1062026b.xhtml, 1062026c.xhtml, 1062026d.xhtml, 962026a.xhtml, 962026b.xhtml, 962026c.xhtml, these pages all work and has links to share it on Whatsapp and Twitter (X).
3. Meet the Team (teams.xhtml) – this page has the faces of the team in universe, acting as members of the company's workforce. This is different from group.xhtml, that one is made for official academic purposes and is made to show un-altered data.
4. Merchandise (merch.xhtml) – this page serves as the company's merchandising department's play town. This page is linked to payment.xhtml to simulate a real-life payment system, the payment system is not actually online and is only made for the sake of semi-realism.
5. Forum (forum.xhtml) – this page houses the in-house forums page powered by Firebase. This forum page is made possible through JavaScript, which took most of the development time.

-
6. Contact Us (contact.xhtml) – this page leads to a google form that can be used to contact the company. It also houses the links to the company's YouTube Channel, X/Twitter, Instagram and Tik Tok accounts. It also displays the company's official email address, which is mystikshorror@gmail.com.

On the footer of each page are links to access the Terms of Service page (tos.xhtml) and the Write With Us page (careers.xhtml). In total the repository contains 16 XHTML pages not including group.xhtml.

2.4 Tools and Technology Selected

The page was built in a code editor, particularly Notepad++ and Visual Studio Code. Rather than using a WYSIWYG editor such as Adobe Dreamweaver. The tools selected during planning were:

- XHTML for the site itself, no other choice due to it being one of the assignment's requirements.
- External CSS files (style.css for shared rules, with specialty style sheets such as article.css, careers.css, contact.css, forum.css and teams.css for page-specific layouts).
- JavaScript (scripts.js and forum.js) for the small number of interactive features, the merchandise cart counter/total and the forum sign-in, registration and posting interface, that could not be achieved with markup and styling alone and also the video player.
- GitHub and GitHub Pages as the version-control system and web host, since the assignment specifies submission via GitHub.
- Firebase Realtime Database for the forums, this is because Github Pages only being able to show static pages.

3.0 ANALYSIS & DISCUSSION

Before the project started, an analysis and discussion was held to observe what must be done to ensure the project's vision is set.

3.1 Requirement Analysis

Using the project guideline as its basis of reference, the following requirements list was made and used as a checklist to ensure that all the needs of the assignment was taken:

Required Item	How It Was Met on Mystiks
Header image	A single branded header banner (header.png) is reused on all pages above the MYSTIKS wordmark and tagline. Forming a singular brand name that makes it very apparent.
Content area	Each page has a dedicated content block: welcome text on the home page, article bodies on article pages, product cards on the merchandise page, recommended articles on the sidebars and so on.
Navigation area	An identical navigation bar (Home, News, Meet The Team, Merchandise, Forum, Contact Us) appears on every page, with group.xhtml added as an extra link on the Home page. This allows users to navigate better.
Disclaimer area	A footer disclaimer stating the site is not an official company, that Mystiks Media does not exist, and that the site was built for learning purposes, plus copyright, last-updated date and recommended browser and resolution, this appears on every page.
Various text formatting	Headings, bold pull-quotes, italic captions, bilingual paragraph pairs and bulleted lists are used throughout the site to make it not seem so boring and uninspired, it gives variety and as is with people and chocolates, variety is very

Required Item	How It Was Met on Mystiks
	welcomed in most situations.
Images	Header banners, article hero images, product photos and team-profile photos appear across the site, sized and cropped for their containers in their pages.
Links (internal, external, anchor, text, image)	Internal links connect the navigation bar and “read more” article cards; external links point to Google Forms that were embedded, and social media profiles that connects to active channels and accounts.
Layout via CSS	All positioning, spacing, colour and typography is handled in external style sheets (style.css plus page-specific sheets); no inline layout styling or HTML layout tables are used except for certain parts where non-external style sheets needs to be used or in the case of group.xhtml where the page does not count towards the entire assignment.

Table 1. Required website items mapped and their implementation in the Mystiks site.

3.2 Information Architecture

Grouping all of the pages on the site to each connection point, the results look like spaghetti but with a side of logic. The main navigation bar links to six top-level sections; the News section then branches into individual article pages, which is a lot, and the Merchandise section links forward into a payment confirmation page. However, each connection connects to `tos.xhtml` and `careers.xhtml`.

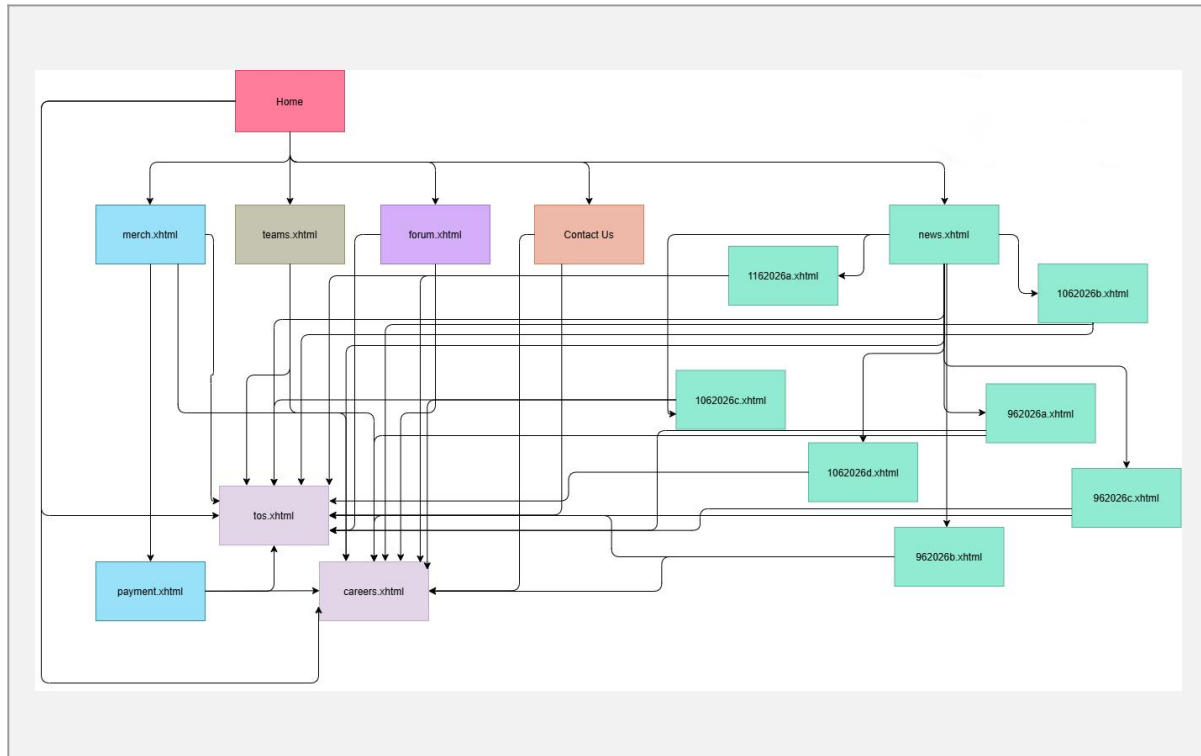

Figure 3

Figure 3. Sitemap of the Mystiks site.

3.3 Content Strategy

Early in the planning period, it was decided that content would be written bilingually, this is to make the site look more welcoming to local users and not alienate the audience, who, mostly are from Malaysia and other Malay speaking countries. Early on, it is good to set the limit and know the shareholders.

Article topics were divided into categories that are used to denote the type of articles it is, for example, some articles were labeled Paranormal, this encompasses all matter of paranormal,

which in this instance meant “out of norm” literally. Thus why, 1162026a.xhtml or the collaboration article were made under the paranormal label because of how it was not normal for a burger restaurant to collaborate with an article website.

This article was written as a sponsored-style collaboration article referencing a partner brand, “Burger Tophat LLC,”. Burger Tophat LLC is a website made for the same assignment but from a different class.

4.0 PROTOTYPING & REVIEW

With the requirements and sitemap settled, Prototyping and Review started. this phase focused on deciding where each element, header, navigation, content blocks and footer, would sit on the page, and on reviewing those layout decisions as well as the colours that will be used for the site.

4.1 Wireframing

Before starting the project, this part was conducted, wireframing was made using Autodesk Sketchbook. The wireframing is used as a guide for the person leading the design section of this assignment to make their vision of the site more easier. This section took not much time due to how simple it was at this stage.

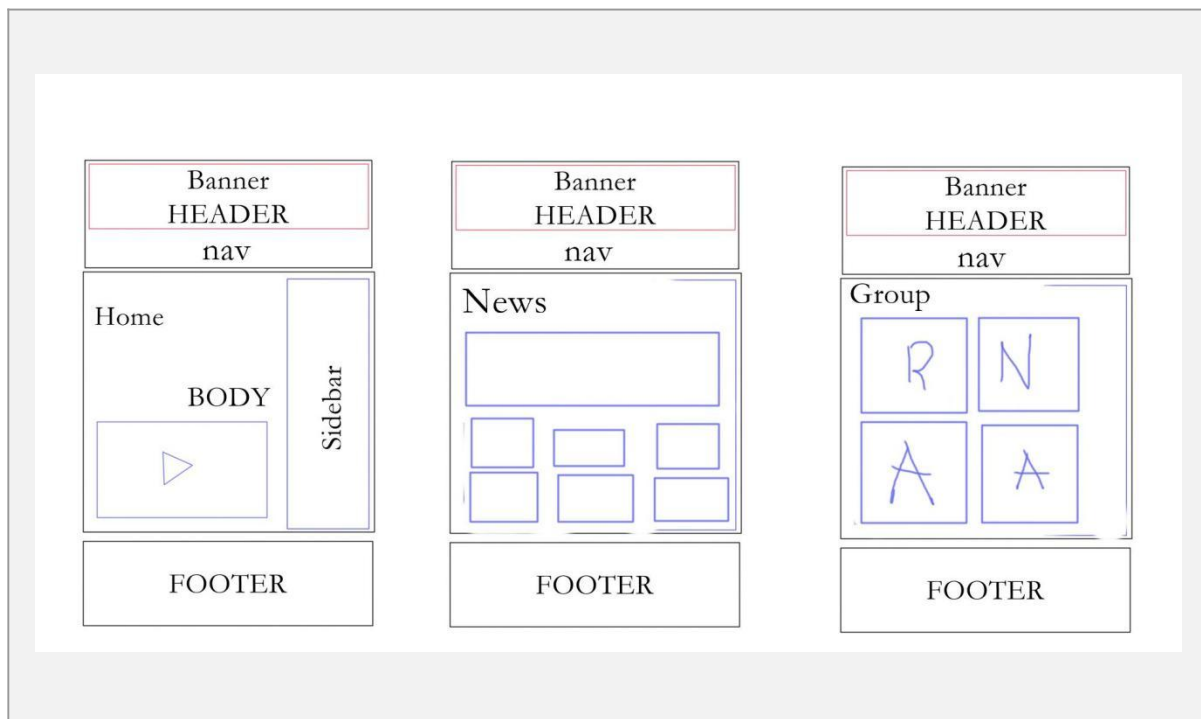

Figure 4

Figure 4. Digital Wireframe sketch of the homepage layout used as the basis of the home, news and team pages early in the development.

4.2 Visual Direction

In line with the company's paranormal nature, the colour palette used were dark. It is not appropriate for a government website, but it is appropriate for a journalism company that specialises in the paranormal. The visuals of the site were mostly inspired by bloody-disgusting.com and nightmare-magazine.com, these were chosen due to their near similar goals as Mystiks. It is also in-line with the Mystiks's modal of paranormal, for bloody-disgusting.com is a horror media site, covering things from video games and films, meanwhile nightmare-magazine.com is more of a tabloid publication.

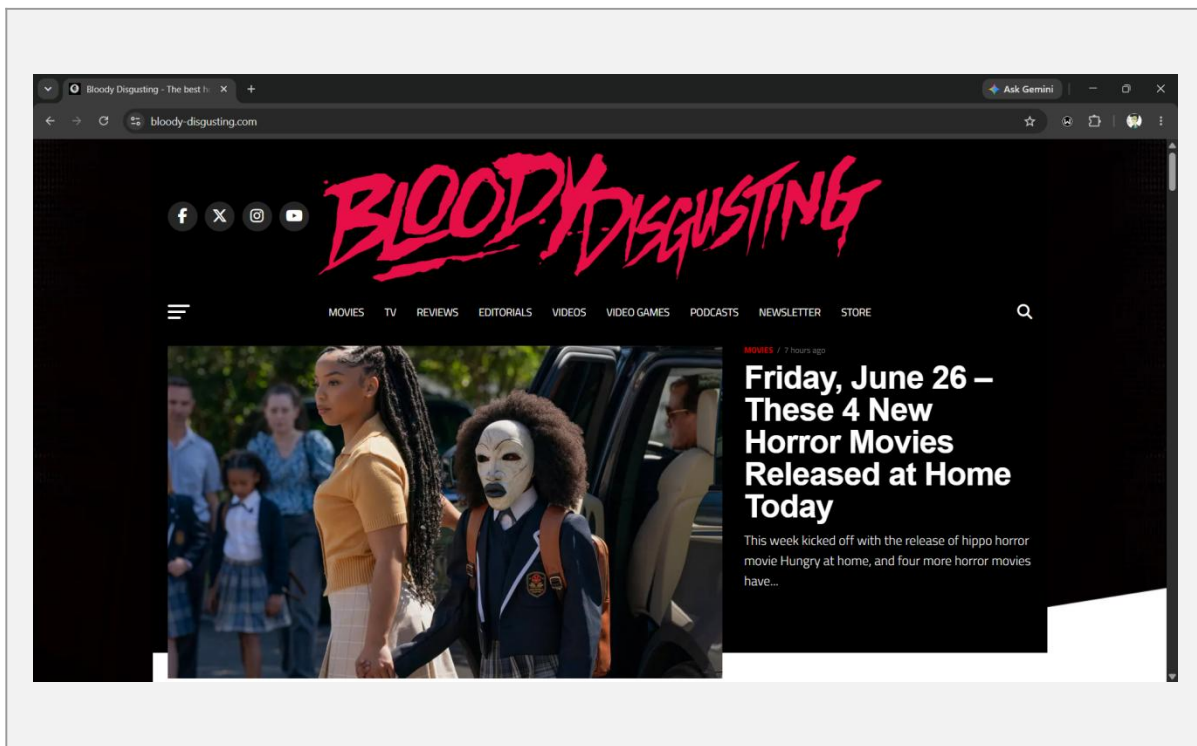

Figure 5

Figure 5. bloody-disgusting.com homepage.

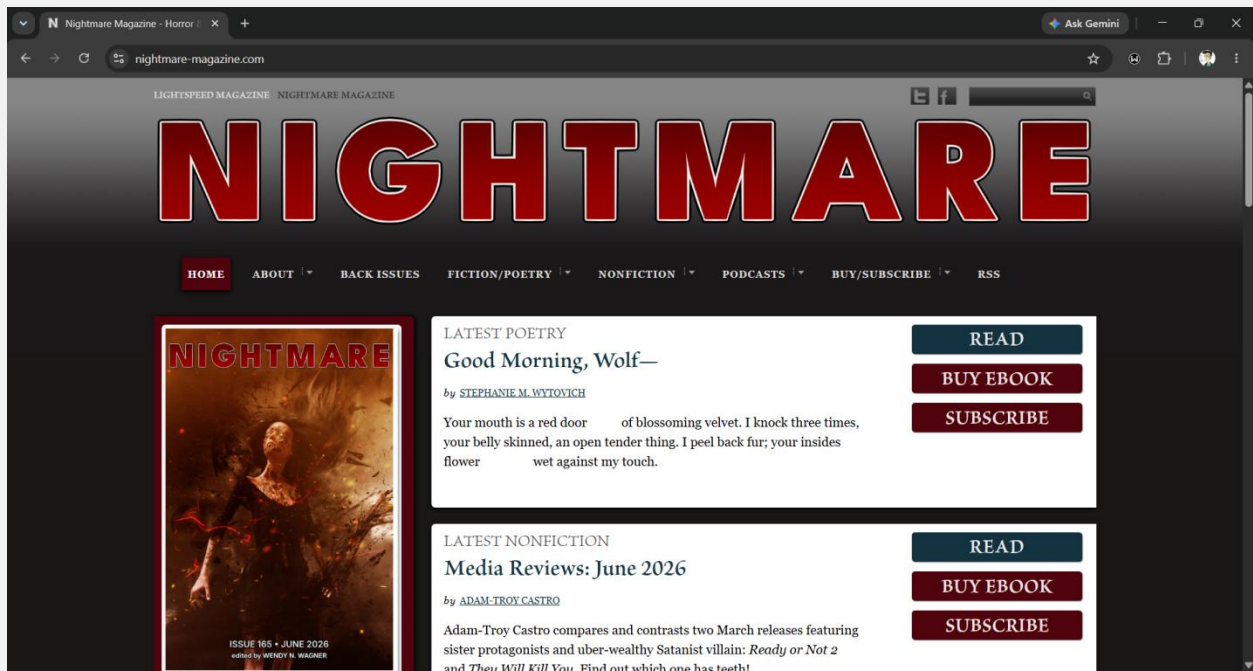

Figure 6

Figure 6. nightmare-magazine.com homepage.

4.3 Group Review and Feedback

Once the wireframes direction were agreed upon, each member reviewed the plan against their own assigned pages and flagged their own concerns. Two notable changes that came out of this review were:

- The Meet the Team page (teams.xhtml) which at first acted also as the group.xhtml requirement was purposely separated from the assignment, so that the in-universe “staff personas” (NAS PENANG, ARIF, Madam Fhasih, RISK) could stay whimsical and playful meanwhile the formal student identities page information required by the guidelines stayed clearly labelled and easy for the lecturer to find.
- The other change made was how to design the Teams page itself. The original rectangle frames stacked together was scrapped for the Teams page and it was used solely for group.xhtml. At this point also, it was agreed that the groups.xhtml must be made with a different colour scheme to separate it from the rest of the assignment. In other words, the colour scheme for that page was changed to make the point across that this page is not like the other pages, and the other pages do not fraternise with this page.

These adjustments were agreed before development started, which reduced the amount of rework needed once coding was underway. The prototyping and review section took 3 weeks long was not due to the fact that the project was hard, it was however due to the nature of the period of time it was conducted in.

5.0 DEVELOPMENT & TESTING

This section describes how the planned wireframes became butterflies tattooed with XHTML and CSS, the page-by-page features built, the JavaScript interactivity added, early development, and how the finished pages were tested before publishing.

Figure 7

Figure 7. Early look of the Mystiks site.

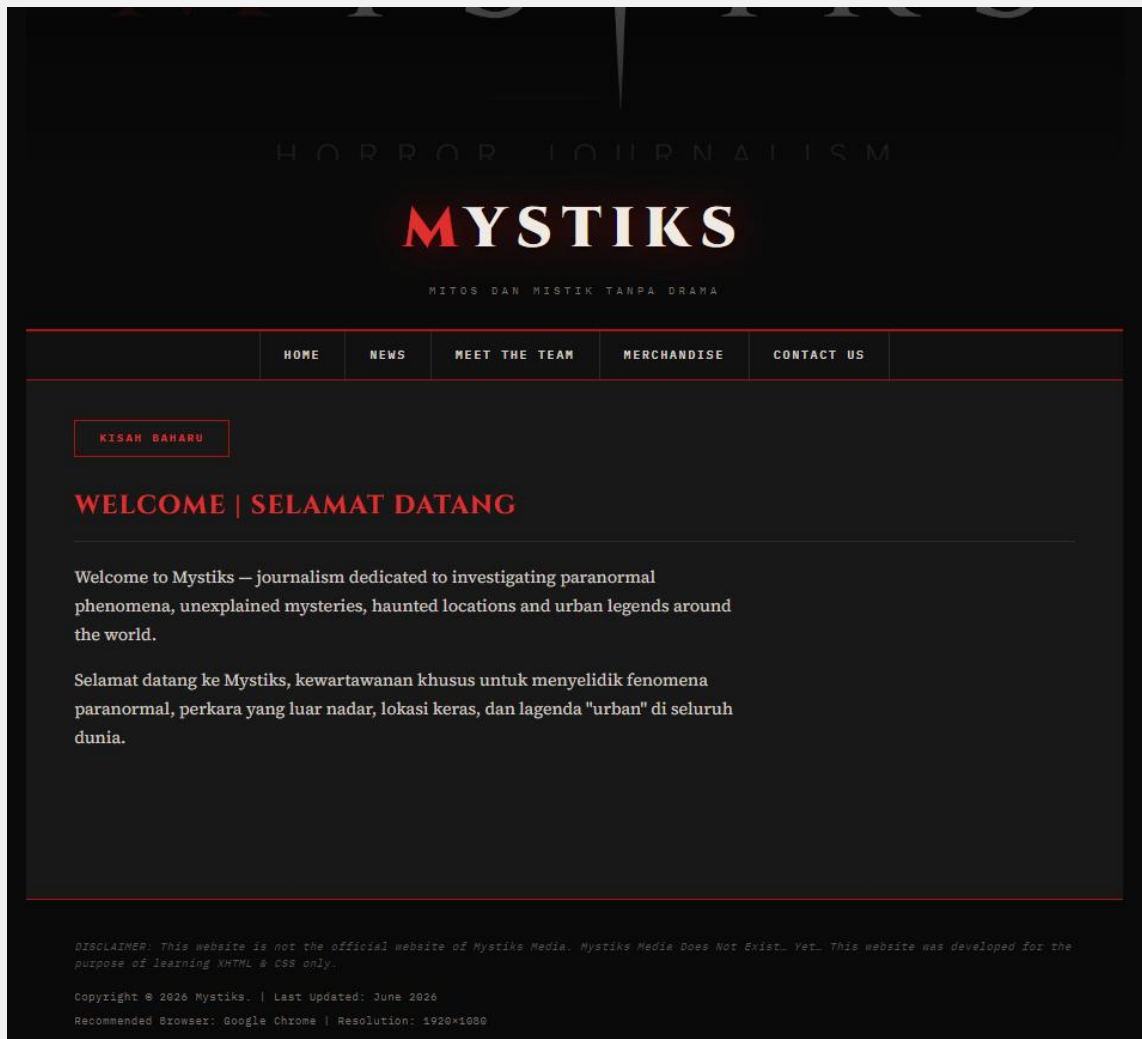

Figure 8

Figure 8. Version 2 of the Mystiks site homepage.

5.1 File and Folder Structure

All files are housed in the repository so that GitHub Pages can serve them directly, except for the database used to store the forum's messages, accounts, posts and upvotes. All images, including the ICO file used for beautification is held in the images folder. Shared formatting lies within style.css meanwhile 4 different dedicated style sheets were made for articles, careers, contact, forum, and teams to cater to their more niche usage.

Two JavaScript files are also used, those being, scripts.js and forum.js. For scripts.js, it holds the interactive button and the video player, meanwhile forum.js holds the programming required to make the forum works. Out of all, only merch.xhtml and payment.xhtml carries their own Javascript in the xhtml.

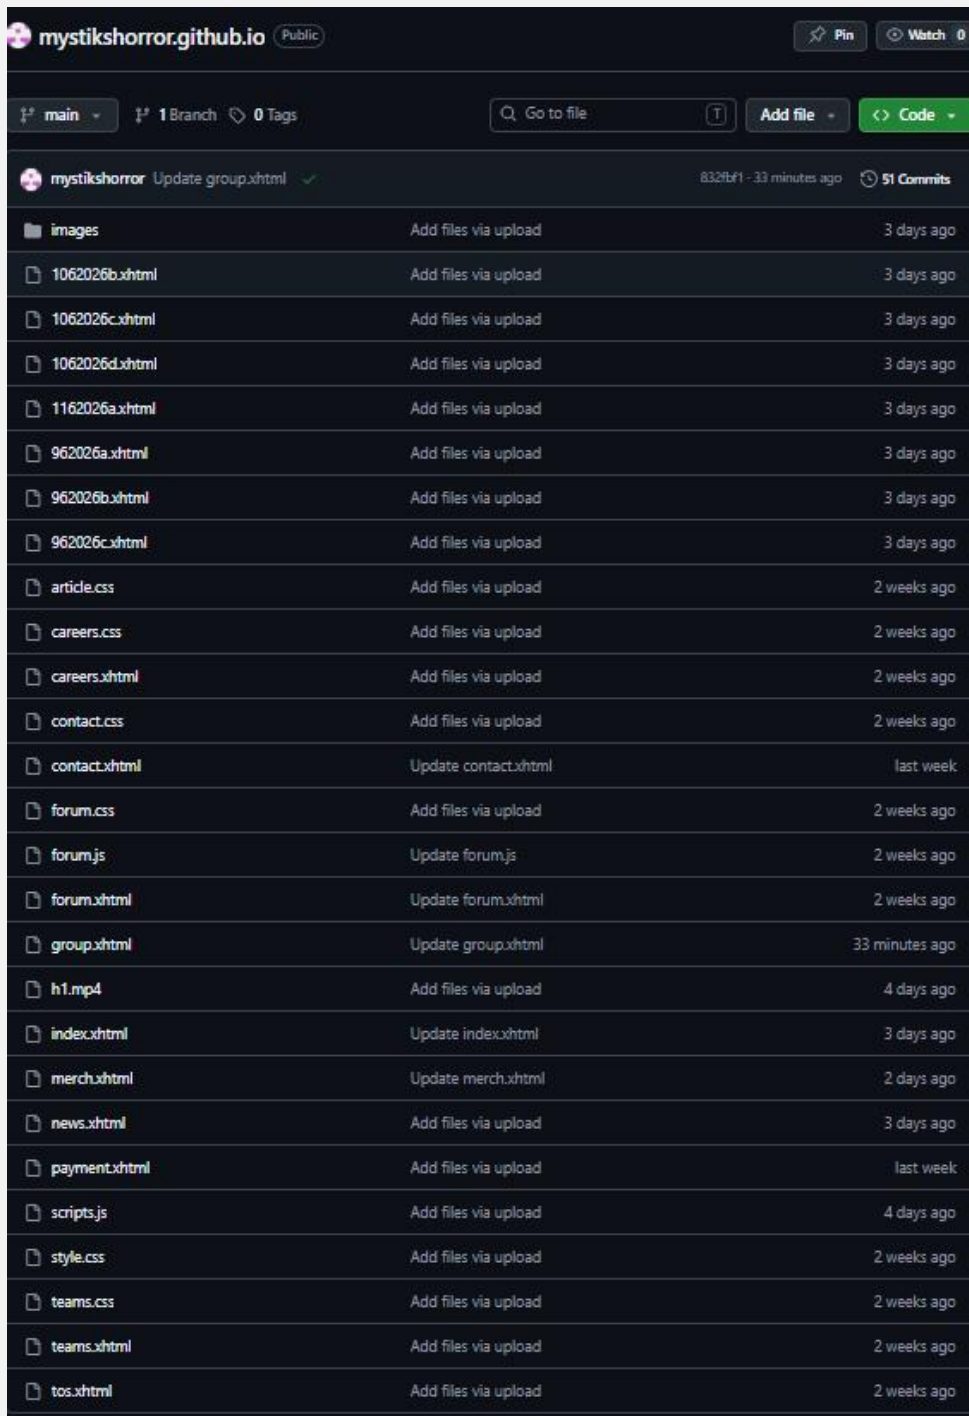

Figure 9

Figure 9. Repository folder structure for the Mystiks project.

5.2 Page-by-Page Development Summary

The table below summarises the purpose and key features built into each major page of the website.

Page	Purpose	Key Features Built
index.xhtml	Homepage	Header banner, bilingual welcome message; “Artikel Menarik” teaser cards linking to the three articles; footer disclaimer and secondary links (Write With Us, Terms of Service, group.xhtml), a video showing a 4 second promotion of the site powered by the Riddex Video Player.
news.xhtml	News listing	Featured-article hero card, grid of story cards each with different thumbnails for each article, category tag, headline, date.
Original Article pages (1162026a, 1062026b/c/d, 962026a/b/c)	Individual news stories	Breadcrumb trail (Home › News › Category); hero image, author, date and category, body copy with sub-headings, a block quote, and inline images with captions, social-share links (X/Twitter, WhatsApp, copy-link), author bio block, related-articles strip, back-to-News link, English translation button.
English Article pages (1162026aenguk, 1062026b/c/d+enguk, 962026a/b/c+enguk)	Individual news stories translated to English	Breadcrumb trail (Home › News › Category); hero image, author, date and category, body copy with sub-headings, a block quote, and inline images with captions, social-share links (X/Twitter, WhatsApp, copy-link), author bio block, related-articles strip, back-to-News link,

Page	Purpose	Key Features Built
		Malay translation button.
teams.xhtml	In-universe staff profiles	Four persona cards (NAS PENANG - Director, ARIF - Chief Operations Officer, Madam Fhasih - Chief Technical Officer, RISK - Chief Editor and Publisher) each with a photo and title, call-to-action link through to the Careers page.
merch.xhtml	Online storefront	Product grid with photo, badge “Baharu”/New, “Terhad”/Limited, category, description and RM price for each item, “Trolì” (cart) button on every product, running cart counter and total shown at the top of the page, plus link through to payment.xhtml.
forum.xhtml	Community discussion board	Category filter tabs, All, Encounters, Theories, Locations, Support, Misc. A post-composer box with a category selector and a 1800-character counter. Sign In / Register buttons and modal dialogs, Newest/Top sort toggle for threads.
contact.xhtml	Contact information	Bilingual intro text. e-mail and location details, social media link list (Instagram, TikTok, X, YouTube), and embedded external Google Form for message submission.
careers.xhtml	Contributor recruitment	Bilingual recruitment pitch, a three-item “What We’re Looking For” list and a benefits list, embedded external Google

Page	Purpose	Key Features Built
		Form for applications, disclaimer noting that submitted articles are reviewed before publishing.
tos.xhtml	Policy / legal page	Ten numbered, bilingual clauses covering acceptance of terms, site content, copyright, disclaimers, merchandise sales, contributor rights, privacy, amendments and governing law.
group.xhtml	Assignment information (required)	Course code, course name, faculty and group number displayed in a table; four member cards each with photo, role, name and student ID, matching the IML254 group.xhtml requirement.
payment.xhtml	Order confirmation	Linked from the Merchandise cart as the next step in the simulated checkout flow.

TULIS BERSAMA KAMI. | WRITE WITH US.

Anda ada cerita? Anda ada keberanian? Anda sanggup pergi ke tempat orang lain tak nak pergi. Kalau anda berdiri di atas kerusi dan teriak "YA!" — anda tidak sayang nyawa anda! Sertai kami, kami mempunyai kadar kecederaan di tempat kerja paling tinggi di dalam industri! (Daripada Sindrom Karpal Tunel).

Kami sentiasa mencari mereka yang ingin tahu, mereka yang berani dan mengambil serius perkara luar nadar. — tanpa menjadi terlampau serius dalam perwatakan.

Do you have a story? Are you brave? Are you willing to go to places that no one in their right mind wants to go to? If you answered with "YES" — you have no survival instinct! Join us, we have the highest workplace injury rates in the industry! (From Carpal Tunnel Syndrome).

We are always on the lookout for curious, fearless contributors who take the unexplained seriously — without taking themselves too seriously.

APA YANG KAMI CARI | WHAT ARE WE LOOKING FOR

⊖ RASA INGIN TAHU YANG TAK BOLEH DIPADAMKAN | UNDYING CURIOSITY

Anda dengar nenek sebelah rumah kata sesuatu itu suah, dan anda tanya nenek itu. Anda layak.

You hear the grandma next door say stuff about bad luck, and you immediately ask them about it. You're qualified.

⊖ TIDAK BUTA HURUF | CAN READ AND WRITE

Tak perlu ijazah. Perlukan keupayaan untuk ceritakan sesuatu dengan jelas, jujur, dan tanpa lebih-lebih drama.

No Bachelor's needed. You only need the ability to tell a story with clarity, honesty and without melodrama

⊖ SKEPTIKAL TAPI TERBUKA | OPEN-MINDED SCEPTIC

Mystics bukan tim buru hantu, bukan tim paranormal yang asyik teriak, "Jelmakan dirikau". Kami wartawan. Anda perlu mencari logik di sebalik batu — walaupun jawapannya agak kelainan.

Mystics is not a paranormal team like Ed and Lorraine, or the Nerds from Insidious, we're journalists. You should find the logic behind each event — even if it is a bit out of the norm.

TERMS OF SERVICE

Dengan menggunakan laman sesawang ini, anda bersetuju dengan semua syarat di bawah. Kalau anda tak bersetuju – Ok. Tiada masalah. Lari.

01 PENERIMAAN SYARAT | TERMS ACCEPTANCE

Dengan melayari, membaca, atau sekadar termenung di hadapan laman sesawang Mystiks, anda dianggap telah membaca, memahami, dan bersetuju dengan semua syarat ini. Ya, termasuk yang anda langkau. Jika anda tidak menerima syarat-syarat ini, tolong jangan layari laman ini.

By using our site, you have agreed to the terms below.

Figure 17

Figure 17. Terms of Service page layout.

5.3 Use of JavaScript

Although the assignment is centred on XHTML and CSS, JavaScript were used to add interactivity that XHTML and CSS can't achieve on their own, these are two separate javascript files used to power two different things.:

- scripts.js powers video player and the small interaction pop-up if a user clicks on the “Kisah Baharu” button on index.xhtml.
- forum.js powers the Community Forum page: it opens and closes the Sign In / Register modal dialogs, switches between the category filter tabs, enforces and displays the 1800-character limit on the post composer, and toggles the Newest/Top sort order for displayed threads.

Both scripts were placed on the Github repository, with only forum.js connecting to an external online database, Firebase Realtime Database.

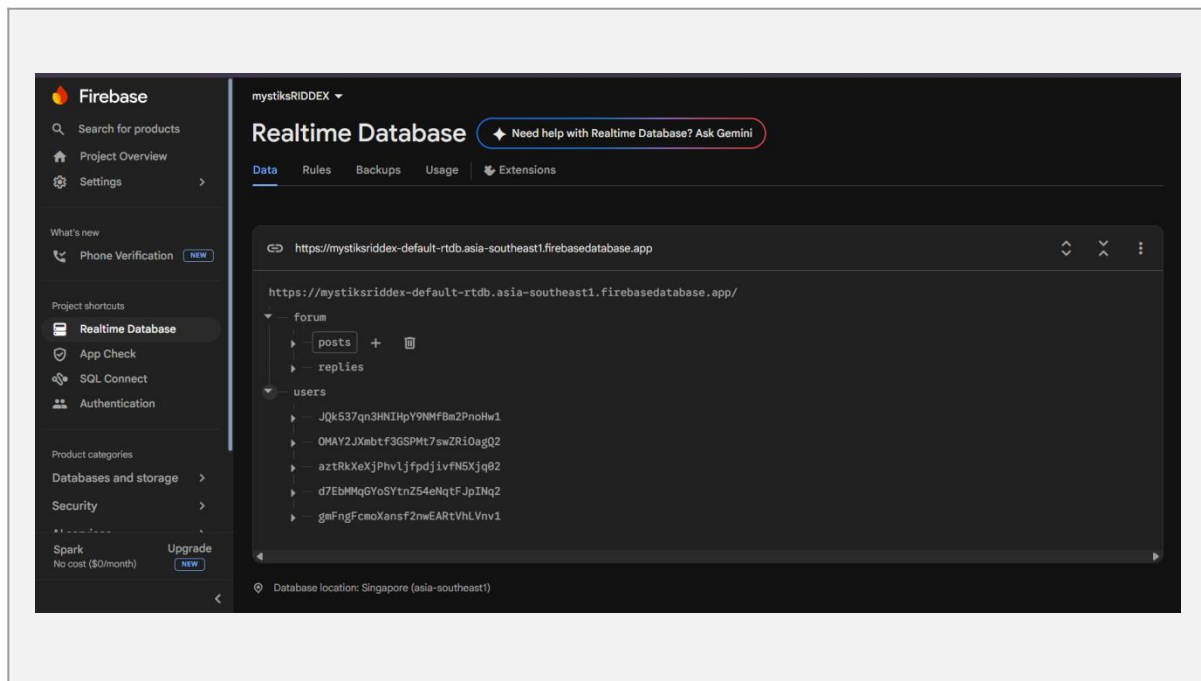

Figure 19

Figure 19. Firebase Realtime Database.

At first, the forums were supposed to be a comment section, however, due to how tedious it was to create a comment section for each article, it was decided that a community forum is to be made instead. This allows a much more simpler and easier to manage page. Before Firebase

was decided to be used, this problem was one of the biggest faced during the Development and Testing phase of the project. This is due to the fact that most of these weren't taught in class, even when combined with last semester's Database course. Thus, the forum section was made from scratch through effort, spite and sheer willpower. Utilising Firebase as the realtime database, it was made simpler for the team to succeed in finishing one of the points in the rubric of creating user interaction.

5.4 Styling Approach

All visual styling is implemented through external CSS except for group.xhtml as stated before. . Shared rules for header, navigation, footer, base typography, disclaimer styling, are made live in style.css and are inherited by every page, while page-specific files override or extend those rules only where a page's layout need differs substantially, for example, article.css adds the breadcrumb and byline styling that only article pages require.

5.5 Testing

Testing was carried out continuously and gradually as the site was developed. Each member tested each page on their personal devices in a browser before pushing changes, and the group did a final cross-check. Testing covered:

1. Navigation testing, clicking every link in the navigation bar and footer from every page to confirm there were no broken, no corrupted or mismatched links. For example, the contact form link, social media links, and the link out to a collaborator's separate GitHub Pages site for the Burger Tophat collaboration article.
2. Cross-page consistency testing, checking that the header image, navigation bar and footer disclaimer render identically on every page, despite each being copy and pasted, checking was still done for each page.
3. Interactivity testing, adding and removing multiple products on the Merchandise cart to confirm the total updates correctly; opening and closing the Forum Sign In and Register modals, typing the 1800-character limit on the forum composer to confirm the counter behaves properly.
4. Content proofreading, re-reading both the Bahasa Malaysia and English text on every page for tone consistency, given the bilingual content strategy decided on in Section 3.3.

5. Browser and resolution testing – verifying the layout in Google Chrome at 1920×1080, which we then listed as our “recommended browser and resolution” in the footer, as required by the disclaimer-area item in the guidelines. Though most of the earlier development were tested using the Internet Explorer’s Successor, Microsoft Edge.

Minor issues found during testing, such as an inconsistent image size on one article thumbnail and a missing hover state on a navigation link, these were corrected directly in the relevant CSS file once identified. Other problems that were found and nipped in the bud was the forum text not showing due to preview issues. That was when it was decided that, why have preview at all when you can just see the whole thing.

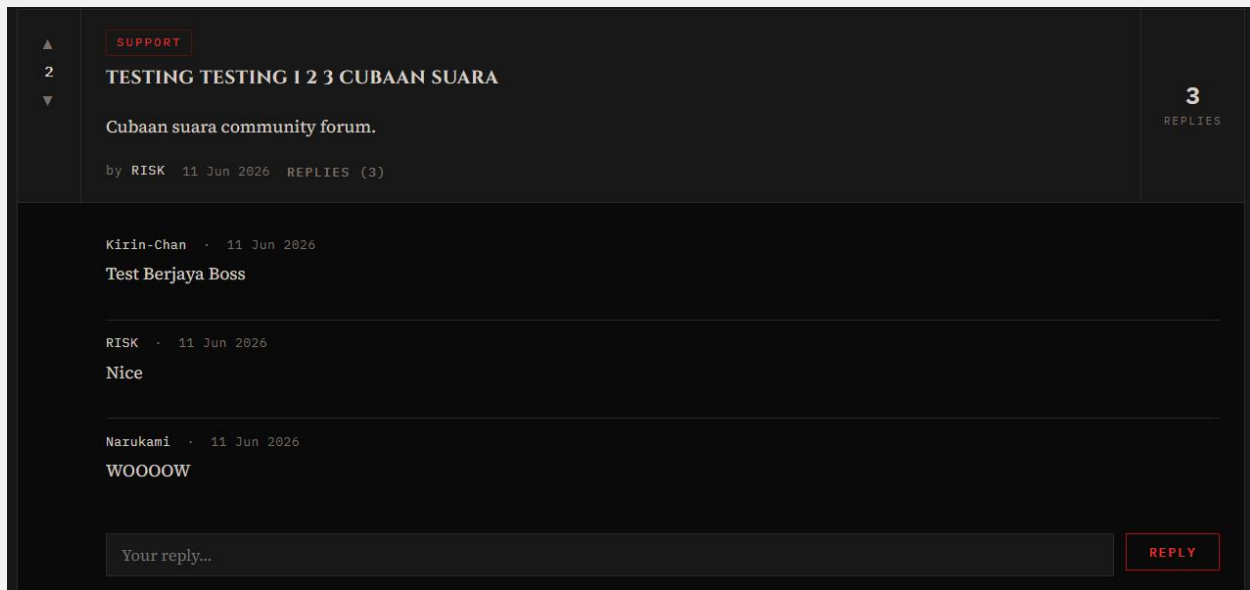

Figure 20

6.0 RELEASE & SEO

The static-hosting feature built into GitHub that serves files directly from a repository. This satisfies the assignment's requirement that the finished site be uploaded to GitHub as the web host.

6.1 Publishing Checklist

Before publishing, the checklist below were made to ensure the site can operate as designed:

- All files and folders were reviewed and renamed in lower case only for the files and folders that weren't like that from start. All images were kept in an images folder, for a less cluttered look
- Meta tags, description, keywords and author, were added to the <head> of each page to support search-engine discover-ability and clearer browser tab titles, however, the Meta-tags in this case were made to be very cosmetic and to only meet the minimum requirements allocated by the guidelines.
- The repository was pushed to GitHub under the account name mystikshorror, which was made solely for the purpose of this assignment and GitHub Pages was enabled on the main branch so that the site is served at the mystikshorror.github.io domain.
- Every image, video (the homepage hero clip, h1.mp4) and script referenced by the pages were able to load correctly from the live, deployed URL, and not just on a local copy, since file-path case-sensitivity and relative-path errors only tend to surface once a project is actually hosted. The problems that rose from the publishing were easily dealt with professionalism expected of the docks.
- Only files relevant to the published website (XHTML pages, CSS, JavaScript and the images/ folder) were kept in the published repository, with no unused drafts or duplicate assets left in the root directory of the repository.

GitHub Pages

GitHub Pages is designed to host your personal, organization, or project pages from a GitHub repository.

Your site is live at <https://mystikshorror.github.io/>

6.2 Search Engine Optimisation (SEO) Considerations

As a static, hard coded site without a content management system, our SEO work focused on the basics that were within reach of plain vanilla XHTML and CSS:

1. Descriptive page titles, each page has a unique <title> reflecting its content, for example; “Mystiks | Meet The Team”, “Mystiks | Merchandise”, “Forum | Mystiks”, rather than a single repeated title across the site, this is because it was found to be annoying to have the same thing for everything.
2. Meta description and keyword tags, added per page so that search engines and social previews can sum up each page correctly, or as correctly as possible.
3. Semantic headings, each page uses a concise header title, for example, “Welcome | Selamat Datang”, “Meet The Team”, “Community Forum”. This is so that users can quickly identify the page’s purpose.
4. Descriptive link text and alt-style image captions, navigation and “read more” links use descriptive text such as “Baca sekarang”, “Lihat Peluang” instead of normal unflavoured text like “click here” phrasing, and figures throughout the site are captioned to give context to images in a more unserious way.
5. Internal linking, every article links back to the News page and to two or three related articles, and every page links back to Home, which keeps the whole site well-connected for users, and to hopefully, allow greater accessibility.

We did not implement advanced technical SEO such as a sitemap.xml file.

7.0 MAINTENANCE

Although this is an assignment for students and not a full fledged product for a company, maintenance were done overtime to ensure the project's survival until the day it was finally presented and forgotten.

7.1 Maintenance Performed During the Project

- Regular small commits were made to the GitHub repository as pages were added or corrected, for example, the unnecessary beautification of the group.xhtml file.
- Broken links identified during testing were fixed directly in the affected XHTML files.
- Content updates, such as adding new article cards to the News page as new “stories” were written, were treated as routine maintenance tasks rather than one-off development work, mirroring how a real news site continuously publishes new content on top of a stable template.
- Finding bugs that were missed during the initial weeding of the bugs, or in this case, bug extermination.

Figure 22

Figure 22. Change log.

7.2 Planned Future Maintenance

Looking beyond the assignment's original scope, these following maintenance and improvement tasks were identified;

1. Regular content audits, moderating the forums where anyone with an account can post, due to constraints of the technology, no auto-moderation was implemented.
2. Accessibility improvements, adding alt text to all images, checking colour-contrast ratios against the dark theme, and testing with a screen reader, none of which were formally covered in this version of the site, and probably making a light and dark mode toggle for a much more customisable and comfortable reader.
3. Basic technical SEO additions.

8.0 CONCLUSION

This project gave the team a very hard time. From start to finish, this project has tested patience, integrity and anger management protocols through the absurd amount of off-hand remarks made by the error message at the top of page. Building Mystiks as a fictional brand and applying XHTML structure and external CSS styling across a genuinely varied set of page types have been educational journey.

In conclusion, this report serves as a log of the failures and successes of the site in reaching its goal, and how those failures somehow get turned into successes through clever motivation of physical violence to the code. This report serves as a reminder that technology, much like humans must not be stuck in the past and must also follow on and adapt to the changing times.

Overall, the assignment strengthened our understanding of how website are like children, and must be disciplined to actually grow up into successful human beings. That discipline being taught through rigorous trial and errors.

APPENDICES

APPENDIX A: Full Page Inventory

The following table lists every XHTML file in the published repository at the time of submission, confirming the fifteen-page minimum required by the assignment brief.

File	Description
index.xhtml	Homepage
news.xhtml	News
1162026a.xhtml	Article Original
1062026b.xhtml	Article Original
1062026c.xhtml	Article Original
1062026d.xhtml	Article Original
962026a.xhtml	Article Original
962026b.xhtml	Article Original
962026c.xhtml	Article Original
1162026aenguk.xhtml	Article English UK
1062026benguk.xhtml	Article English UK
1062026cenguk.xhtml	Article English UK
1062026denguk.xhtml	Article English UK
962026aenguk.xhtml	Article English UK
962026benguk.xhtml	Article English UK
962026cenguk.xhtml	Article English UK
teams.xhtml	Meet the Team
merch.xhtml	Merchandise

File	Description
payment.xhtml	Payment
forum.xhtml	Community Forum
contact.xhtml	Contact Us
careers.xhtml	Write With Us
tos.xhtml	Terms of Service
group.xhtml	Assignment information and group member page

Table A1. Complete inventory of published pages, totalling twenty four XHTML files.

Supporting files referenced by these pages include style.css, article.css, careers.css, contact.css, forum.css and teams.css for styling, scripts.js and forum.js for interactivity, an images/ folder containing all photographs and thumbnails, and a short video file (h1.mp4) used on the homepage.

APPENDIX B: Live Website and Repository Links

The table below lists the live URL for each major page so that the lecturer can navigate directly to any section of the website during evaluation.

Page	Live URL
Home	https://mystikshorror.github.io/index.xhtml
News	https://mystikshorror.github.io/news.xhtml
Meet the Team	https://mystikshorror.github.io/teams.xhtml
Merchandise	https://mystikshorror.github.io/merch.xhtml
Forum	https://mystikshorror.github.io/forum.xhtml
Contact Us	https://mystikshorror.github.io/contact.xhtml
Write With Us	https://mystikshorror.github.io/careers.xhtml
Terms of Service	https://mystikshorror.github.io/tos.xhtml
Group	https://mystikshorror.github.io/group.xhtml
GitHub Repository	https://github.com/mystikshorror/mystikshorror.github.io

Table A2. Direct links to live pages and the source repository.

APPENDIX C: List of Tables

The table below lists all tables

Table	Table Names
Table 1	Required website items mapped and their implementation in the Mystiks site.
Table 2	Page-by-page summary of features developed for the Mystiks website.
Table A1	Complete inventory of published pages, totalling twenty four XHTML files.
Table A2	Direct links to live pages and the source repository.
Table A3	List of Tables

Table A3. List of Tables

APPENDIX D: Turnitin Index

*% detected as AI

AI detection includes the possibility of false positives. Although some text in this submission is likely AI generated, scores below the 20% threshold are not surfaced because they have a higher likelihood of false positives.

Caution: Review required.

It is essential to understand the limitations of AI detection before making decisions about a student's work. We encourage you to learn more about Turnitin's AI detection capabilities before using the tool.

Disclaimer

Our AI writing assessment is designed to help educators identify text that might be prepared by a generative AI tool. Our AI writing assessment may not always be accurate (i.e., our AI models may produce either false positive results or false negative results), so it should not be used as the sole basis for adverse actions against a student. It takes further scrutiny and human judgment in conjunction with an organization's application of its specific academic policies to determine whether any academic misconduct has occurred.

0% Overall Similarity

The combined total of all matches, including overlapping sources, for each database.

Filtered from the Report

- Bibliography

Integrity Flags

0 Integrity Flags for Review

Our system's algorithms look deeply at a document for any inconsistencies that would set it apart from a normal submission. If we notice something strange, we flag it for you to review.

A Flag is not necessarily an indicator of a problem. However, we'd recommend you focus your attention there for further review.

Match Groups

- 
1 Not Cited or Quoted 0%
 Matches with neither in-text citation nor quotation marks
- 
0 Missing Quotations 0%
 Matches that are still very similar to source material
- 
0 Missing Citation 0%
 Matches that have quotation marks, but no in-text citation
- 
0 Cited and Quoted 0%
 Matches with in-text citation present, but no quotation marks

Top Sources

5.3 Use of JavaScript

Although the assignment is centred on XHTML and CSS, JavaScript were used to add interactivity that XHTML and CSS can't achieve on their own, these are two separate javascript files used to power two different things.:

- scripts.js powers video player and the small interaction pop-up if a user clicks on the "Kisah Baharu" button on index.xhtml.
- forum.js powers the Community Forum page: it opens and closes the Sign In / Register modal dialogs, switches between the category filter tabs, enforces and displays the 1800-character limit on the post composer, and toggles the Newest/Top sort order for displayed threads.

Both scripts were placed on the Github repository, with only forum.js connecting to an external online database, **Firebase Realtime Database**.

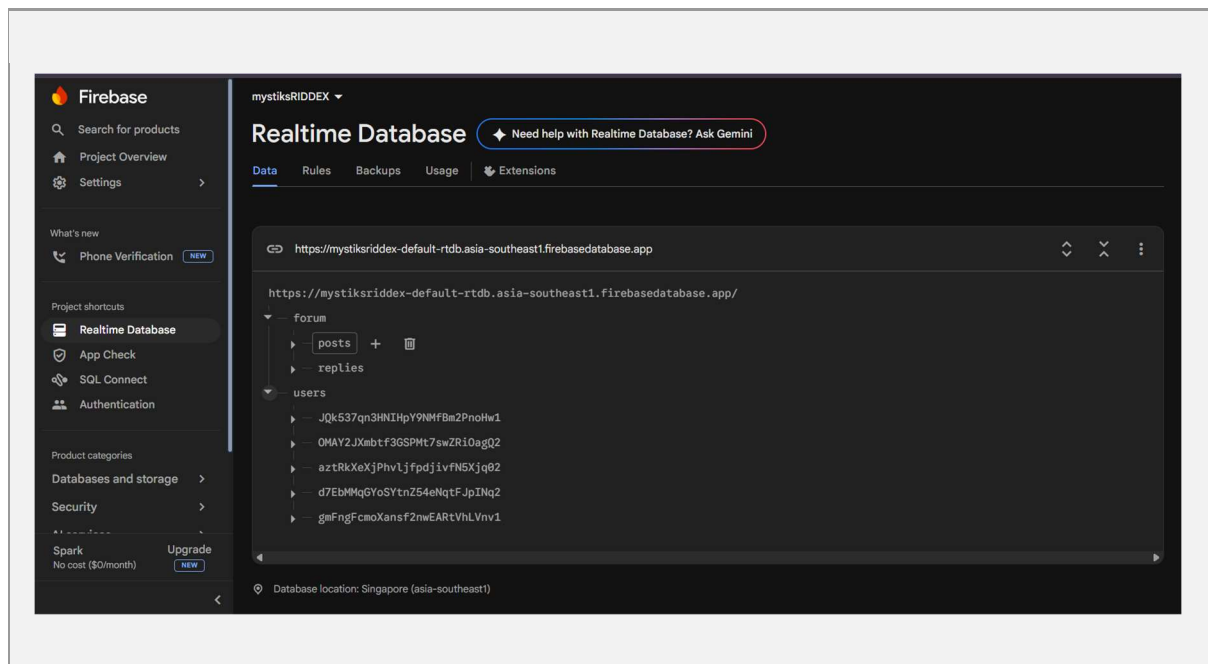

Figure 19

*Figure 19. **Firebase Realtime Database**.*

At first, the forums were supposed to be a comment section, however, due to how tedious it was to create a comment section for each article, it was decided that a community forum is to be made instead. This allows a much more simpler and easier to manage page. Before Firebase was decided to be used, this problem was one of the biggest faced during the Development and Testing phase of the project. This is due to the fact that most of these weren't taught in class, even when combined with last semester's Database course. Thus, the forum section was made from scratch through effort, spite and sheer willpower. Utilising Firebase as the realtime database,
